

MAJID ILIYAS

Software Engineer - Fullstack Ai Developer

7310086133 | majidiliyas1717@gmail.com | linkedin.com/in/majid-iliyas-673612247 | github.com/Majidiliyas17 | Lucknow, India

SUMMARY

Fullstack Developer with hands-on experience building scalable REST APIs, multi-tenant SaaS platforms, and end-to-end web applications using Node.js, TypeScript, React, Next.js, and PostgreSQL. Strong foundation in Python and comfortable working across FastAPI-style REST architectures, database design, authentication systems, and third-party API integrations. Actively building AI engine architecture using Python FastAPI microservices, with working knowledge of RAG pipelines and LLM orchestration frameworks. Comfortable owning both backend services and frontend interfaces, from design through deployment, with a track record of independently shipping and maintaining production systems.

SKILLS

Node.js • JavaScript • TypeScript • Express.js • React • Next.js • Python (FastAPI) • AI • ML • RAG (Retrieval-Augmented Generation) • LangChain • Vector Databases • AI Engine / Microservices Architecture • REST API Design • PostgreSQL • MongoDB • Redis (familiar) • TypeORM • DSA • Git & GitHub • Postman • JWT / RBAC Authentication • System Design Fundamentals • AI/LLM API Integration (ChatGPT, Claude, DeepSeek) • Docker (familiar) • Digital Ocean • Hostinger • PgAdmin • HTML/CSS

EXPERIENCE

Software Developer | Levels Tech (US-based)

06/2025 – 08/2026 | Hybrid

LevelsTech is a global software development company delivering IT solutions for complex business challenges, with offices in Tucson, Arizona and Lucknow, India.

- Develop and maintain scalable backend APIs using Node.js and TypeScript for SaaS-based multi-tenant applications, with PostgreSQL and TypeORM for data modeling, entity relationships, and query optimization.
- Design and implement RESTful services, database integrations, and business logic to support core platform functionality — patterns directly transferable to FastAPI/Flask-based API design.
- Collaborate with cross-functional teams to integrate backend services with frontend systems, ensuring smooth end-to-end application performance.
- Maintain secure, reliable, and efficient backend architecture through clean, well-documented, and testable code.

Junior Software Developer | Levels Tech (US-based)

12/2024 – 06/2025 | Hybrid

- Started as a Junior Software Developer, building foundational backend features and getting up to speed on the company's multi-tenant SaaS architecture using Node.js, TypeScript, and PostgreSQL.
- Contributed to REST API development and database schema work under guidance, before transitioning to a full-time Software Developer role after demonstrating strong ownership and delivery.

PROJECTS

HELLOHRMS (hellohrms.com | levels.hellohrms.com)

Scalable SaaS-based HRMS platform for employee management, leave tracking, attendance, and payroll.

- Developed and maintained backend APIs and business logic for employee management, leave management, attendance, and payroll modules.
- Built out a full Procurement module — covering purchase requests, vendor tracking, and approval workflows — integrated into the existing SaaS architecture.
- Implemented secure authentication, role-based access control (RBAC), and data isolation across a single platform instance.
- Optimized backend performance and database interactions to maintain reliability at scale.

AiLeadMs (aileadms.com)

AI-powered, multi-tenant Lead Management System automating lead generation, management, and social media marketing workflows.

- Worked as a fullstack developer, building backend APIs/services alongside the React-based frontend UI to manage lead data, campaign workflows, and automation processes.

- Implemented secure token-based authentication and third-party API integrations (YouTube, Instagram, Facebook) for automated content posting and campaign management, including token refresh and error-handling logic.
- Designed lead tracking and management modules for efficient storage, retrieval, and processing — directly applicable experience for AI/LLM API integration work.
- Handled deployment for the project.

Itwa Properties (aspslai.com | itwaproperties.com)

Personal startup and flagship platform under ASPSLAI (Area-Specific Properties & Services Listings) — a future AI-based, area-specific digital ecosystem vision. Built end-to-end and independently deployed to production.

- Built the complete application full-stack — backend REST APIs and business logic (Node.js, TypeScript, PostgreSQL) and frontend (Next.js) for property listings, users, and service data.
- Designing and developing the platform's AI engine architecture as Python FastAPI microservices, laying the groundwork for RAG-based, area-specific AI search and recommendations.
- Designed and managed the database schema and API integrations to support efficient data handling and platform scalability.
- Independently handled deployment and server management, ensuring reliable operation in a live production environment.

Safar Music (safarmusic.aspslai.com)

Music streaming platform built with Next.js, using YouTube embedding to power playback.

- Built the frontend and playback experience using Next.js, integrating YouTube embed APIs for streaming tracks.
- Designed the UI/UX for browsing and playing music, focused on a smooth, ad-free listening experience.

Secure File Storage System (securefileassignment.netlify.app)

Web application for securely uploading, storing, and managing files.

- Built a secure file storage system covering upload, storage, and retrieval workflows for user files.
- Implemented deployment and hosting to keep the application live and accessible.

Reception Management System (reception.trehta.in)

Designed and built the backend for a reception/front-desk management system used to handle visitor check-ins, appointment scheduling, and staff notifications.

- Built REST APIs using Node.js and PostgreSQL (pgpool) to manage visitor records, appointments, and real-time front-desk workflows.
- Designed relational database schema for visitors, appointments, and staff records, optimizing queries for concurrent access via pgpool connection pooling.
- Implemented clean API structure and error handling suitable for adaptation to Python frameworks such as FastAPI or Flask.
- Handled deployment for the project.

UP55 Fast Food Cafe (up55fastfoodcafe.com)

Business website for a fast food cafe & dhaba client, built and independently managed end-to-end.

- Designed and developed the complete website using HTML, CSS, and JavaScript for a live client.
- Independently manage ongoing content updates and site maintenance for the client.
- Handle deployment and hosting, ensuring the site stays live and reliable in production.

EDUCATION

B.Tech in Computer Science — 9.1 CGPA

Integral University, Lucknow, UP

08/2021 – 05/2025

CERTIFICATIONS

- Microsoft Azure AI Essentials — Microsoft & LinkedIn Learning (June 2025)
- Introduction to Technology Apprenticeship Job Simulation — Accenture via Forage (July 2025)
- Career Essentials in Cybersecurity — Microsoft & LinkedIn Learning (August 2024)
